One film. One job that will not stay ordinary.

RECOMMENDED LEAD FILM

ONE CLEAN TAKE

90 seconds. The recordist tries to finish a small professional task while the world becomes unwilling to let the work leave.

A live counter. A deliberate STOP. Something still approaching. A tactical answer. A building that wants the tapes. A road inside a breathing body.

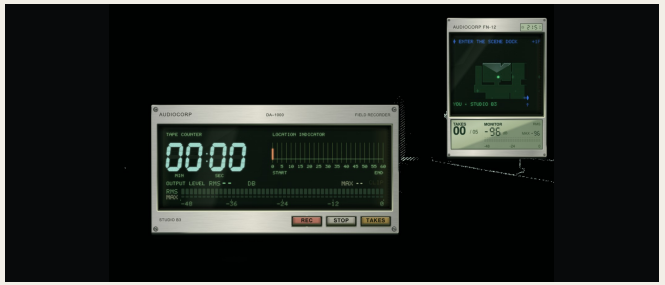

ACTUAL SOURCE VISTA / staged production-rendered still; a new traversed camera is required. This is the thumbnail front-runner, not proof of filmed motion.

WHY ONE, RATHER THAN TWO BY DEFAULT

The page can show breadth in still images. Its missing film job is to make one playable decision feel irresistible. A second atmospheric montage would repeat the first film's strongest images and divide the same capture effort. The bus treatment on page 5 is a genuinely different substitute, with a narrower promise. Film count and duration are editorial judgments, not proven conversion rules.

The first twenty-eight seconds

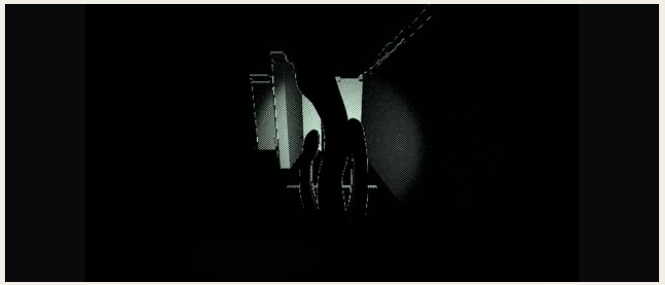

REFERENCE: idle deck in the approved surface stack. New footage must show the real running counter and acceptance.

00-09s / A01

Finish something small

Current ordinary B3 live-take view, already rolling. Last five seconds before the actual usable minimum, STOP and real acceptance. The deck sits lower-left; glass and room remain legible.

Sound: Heard room, actual warning source, transport click. Speaker continues after STOP.

REFERENCE: current-density lit fixture, silent. Preserve an ordinary B3 sightline and actual game audio in the master.

09-20s / A02

Keep looking

Continue the same source shot into a deliberate turn to the north booth glass. Let the actual postminimum HUSH visit approach in depth. Hold its current density movement against the aperture.

Sound: Same continuous world audio and real onset; no STOP-to-monster sting.

REFERENCE: older arrival composition. New human-action shot needed; this is not a finished dialogue performance.

20-28s / A03

People were here first

Clear scene break: job-sheet delivery detail, then one person with a physical task in the rainy vigil. A glance up toward the building completes the shot; no dialogue-tree inventory.

Sound: Real exterior rain, cloth or flask handling. No invented Sarah speech. Optional editorial text: FIVE ROOMS. ONE CLEAN MINUTE EACH.

Decisions, consequences, impossible scale

REFERENCE: old low-cadence battle review. Re-capture current finish, actual arriving equipment and one full consequence.

28-40s / A04

Make a decision that answers back

One real tactical exchange: readable intention, earned equipment counter, visible enemy response. Hold the accepted command and consequence together; leave ordinary hands and useful HUD visible.

Sound: Native telegraph, accepted control and response; no action-shooter sweetening.

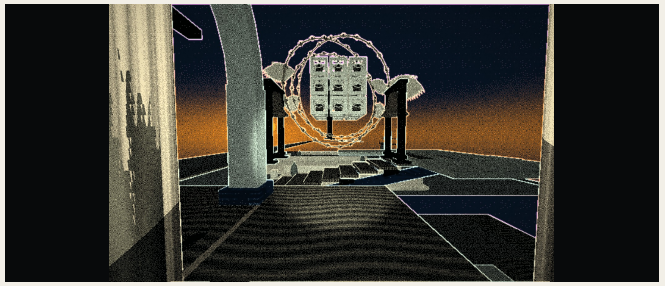

REFERENCE: two-second silent case-pull study. This does not yet prove the complete pressure / response / release.

40-47s / A05

The work becomes valuable

Approach real GIVE ME THE TAPES lettering. Let the caught case and actual pull-free effort remain connected. Keep moving with it.

Sound: Real catch, strain and release. Preserve case custody.

REFERENCE: final-rendered still, developer placement. Shoot the current giant instrument route through ordinary movement.

47-59s / A06

Prove that the impossible place is walkable

One continuous approach on the current giant instrument route. A clear destination, a step across a material joint, then a look back at the path already crossed. At most one cut if scale will not read.

Sound: Actual Source acoustic perspective. A native Bach or Couperin phrase can begin here, in its own location. Keep authored threat withdrawal.

ONE CLEAN TAKE / 59-90 SECONDS / SCALE, THEN A PRACTICAL RELEASE

Hold until it is undeniably breathing

INHALE / 3.861s in reference

LOADED ARREST / 7.477s

RELEASE / 11.667s

59-74s / ONE SUSTAINED BREATH

Explicitly enter the full drivable journey, with a real field take already rolling. Settle voluntarily beneath the ribs. Keep windscreen, road and steering scale visible. Hold the expansion, arrested weight and release; the saved reference has a 13.6-second cycle. The audience must perceive respiration, not merely endure thirteen seconds of dark geometry.

74-83s / STOP THE TAPE, NOT THE WORLD

Look down and physically stop the cabin recorder. Keep engine, rain and the ribs continuing through the hand reach. Return the gaze forward. The modest success is preserving a take inside something unresolved. Current UI says FIELD TAKE / READY; its counter is the shared tape head. Do not add a SAVED badge or grant room-tone credit.

83-90s / ACTUAL TITLE + VERIFIED DESTINATION

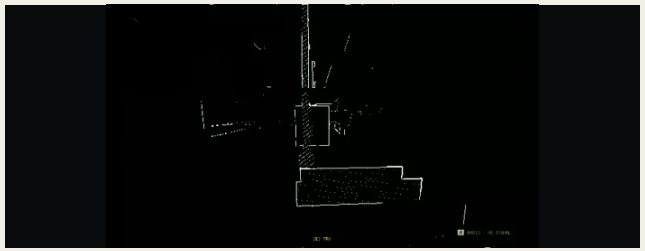

Use the current CHUNK SURFER identity with a calm reading hold and one accurate itch action. No fake studio hardware logo, date, availability claim or final lunge. The last sound is the captured material decay, with room left for quiet.

Reference: cage-physiology-review.webm - 24.398s, 1280x800, approximately 30 changing frames/s, audio stream present. Native study placement; final source freshness, ordinary-route framing and listening review remain pending.

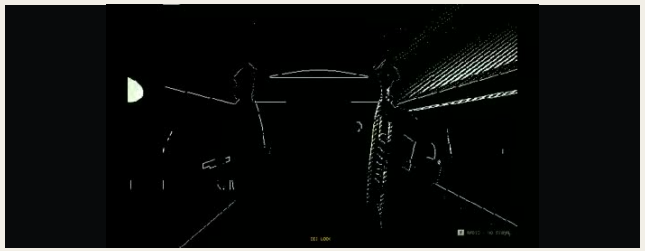

The other film: THE ONLY WAY THROUGH

The exit fails; the woman becomes the only opening; the coach contains an impossible wet distance; it returns you to the same bus. Few cuts, no feature montage. This is the more concentrated horror film, but the weaker account of the whole game: it can look like a short scripted corridor experience.

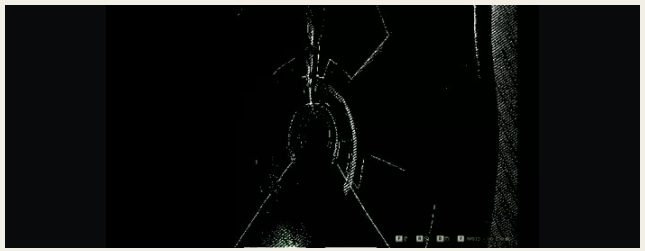

00–08	The way back closes - Inside the real coach. Look toward the entry; its door shuts. Keep the aisle, expected exit and woman in a readable spatial relationship.
08–17	Comfort recedes in order - Lights fail one by one as the player advances. Keep enough practical light on aisle/seat geometry to see where to go.
17–21	The reasonable answer fails - E on the rear door: all three physical pulls and recoil, at normal speed. Stay for the mechanical refusal.
21–31	Turn toward the answer you avoided - One deliberate turn to the woman. Hold the player choosing to approach. No cut to a different gore scene.
31–38	Open the other door - Separate E interaction; full three-second body opening, then a step beyond the coach structure. Let both enclosures exist in one shot.
38–51	It is much longer inside - Walk the wet corridor. One overt ellipsis may shorten its 72m length, followed by a sustained forward walk. Do not change its speed or imply the coach is merely twelve metres long.
51–56	Back at the same bus - Real expulsion and exterior recognition. Hold the coach in view long enough to understand the return.
56–64	Title - Actual title and verified itch action. No closing lunge.

INSPECTION ONLY / 90s source

INSPECTION ONLY / 132s source

INSPECTION ONLY / 190s source

640x360 / ~9fps: inspection only. Fresh ordinary-lighting footage is required.

Build the film from causes, not effects

THE RAW MATERIAL

Continuous ordinary-control runs with source timestamps; actual camera positions; untouched game mix plus available source stems; exact saved room and drive takes; full active writing and trigger conditions; current renderer, asset and build identities. An idle recorder render or an old review reel is a shot reference, not a release master.

THE EDITING METHOD

First assemble A01-A02, A04 and A07-A08 as complete actions. Use Resolve or Premiere for an image-led rough cut and frame-accurate decisions; REAPER for separated transport, world, music and dialogue stems. Keep original handles and publish an edit decision list with any ellipsis, crop, replacement audio or cinematic camera declared.

THE SOUND ARGUMENT

Begin close: room floor, warning source, STOP. Let the threatening source continue. Shift to ordinary exterior rain for the human beat. Let actual tactical telegraph and response define rhythm. Give Source its authored sensory withdrawal. In the car, use cabin and outside perspectives together; the tape stops while the world continues.

CAPTURE ONLY WHAT THIS FILM NEEDS

1. Current B3 operation and postminimum visit, plus one real human action. 2. One earned tactical counter, case pull and current Source traversal. 3. One real drive field take, full rib movement and physical STOP. Shoot the bus only if choosing the alternate. This avoids building an unnecessary general trailer library.

THE ACTUAL SHADER IS THE LOOK

Use the current final dither/VFD pipeline. Compose light against threat, preserve scale and settle the gaze. Prefer a genuine stable 1080p/30 capture over a duplicate-filled 60fps file. Test capture-on against capture-off. Never conceal an input/frame stall with optical flow, artificial shake or a speed ramp.

WHAT IS NOT READY

B3, combat, bus and human-operation recordings require fresh masters. Cage, cliff and Earth Fall are strong motion references, not complete current release proof. Finished shock-jock programmes and Sarah Last Light takes are absent. No new voiceover is required; scratch voices are excluded. Final wet/loaded cage Foley still needs an audition or declared trailer replacement.

What would show that this is right?

FRESH VIEWERS - OBSERVE, THEN ASK

Use people who have not seen the game or treatments. After a short first exposure: What were you trying to do? After the whole film: What action changed the situation? What kind of play do you expect? Which image and sound remain? What would you do next? Observe abandonment, confusion and voluntary interest before asking whether it was scary.

Reject an opening that suggests the player's real microphone is mandatory, STOP summons a monster, REC transforms architecture, or the game is a shooter. Reject an ending that suggests STOP freezes the ribs. Test muted and sound-on first views with separate fresh people; replay reveals the answer. Small pilots diagnose mistakes; they do not prove conversion uplift.

DELIVERY + PERCEPTUAL CHECK

Test the actual hosted encode on the itch page, including its single-column layout, at ordinary laptop, phone and small-player sizes. Inspect dither in motion, shadow separation, VFD legibility, actual frame intervals, captions, mono fold-down, ordinary speakers and headphones. Keep peaks restrained. Human comprehension, fear, sound acceptance and hosted-video quality remain pending.

Research performed: source tracing, 22 saved movies probed, 19 sparse frame sheets, asset/module freshness checks and independent internal editorial challenge. No new continuous master, completed film, real-time full-movie audition, fresh viewer result or public upload is claimed.

PRIMARY CRAFT + PLATFORM EVIDENCE

itch - Designing your page
Supported video hosts and Watch trailer entry. Supports a strong primary film; does not prove optimum length or count.

Derek Lieu - The first shot
A readable operation with conflict and resolution; our slower recording application is an editorial inference.

Derek Lieu - Trailer sound design
Sounds need distinct jobs. Preserve the game's sound identity rather than imitate a dense film-trailer effects library.

Walter Murch - In Conversation
Manage what scene changes and beginnings/endings make the audience understand. No perceptual-science claim is borrowed.

YouTube - Upload encoding
Progressive H.264, MP4, 48k audio, same captured frame rate, SDR BT.709. Actual hosted re-encoding still needs inspection.

Local evidence: artifacts/storefront-films/material-audit.md; narrative-film-audit.md; editorial-review.md; clip-probes.json; inspection/index.json. Exact timed source/capture plan: edit-plan.json. The recommendation is a design judgment supported by these observations, not an independently validated result.
